

# Healthcare Blocks

*We empower healthcare technology to move at the speed of innovation, not regulation.*

## What is Healthcare Blocks?

Since 2013, Healthcare Blocks has been eliminating the burden of infrastructure management and system maintenance surrounding HIPAA. We are healthcare veterans and have great empathy for the regulatory hurdles that healthcare technology companies must navigate. Our specially-designed platform automates and enforces many of the requirements mandated under the Health Insurance Portability and Accountability Act (HIPAA), enabling you, the developers, engineers, and growth startups to focus on features and functionality, rather than regulatory compliance. We have had the privilege of working with Jumpstart Foundry companies in the past, and are pleased to offer their current portfolio companies a discount which can be seen on the next page.

*We aren't just a hosting platform - We are healthcare's hosting platform.*

## Jumpstart companies that love us:

"Allows me to focus on building product and not on DevOps tasks"

- Howard Bright, InvisionHeart

"Healthcare Blocks has been instrumental in Utilize Health's ability to operate our healthcare business in a safe and secure digital environment. Every day, we have confidence that our technology services are in good hands, will remain secure, and that we will be supported by their team as needed."

- Adam Harthcock, Utilize Health
